# Sinusoidal profiles

APL
ARCHITECTURAL PROFILES

A range of profile cladding that produces striking and exciting facades on all building types

# Details matter and APL has the experience and knowledge to help

Sinusoidal is a range of profile cladding that produces striking and exciting facades on all building types. It is available in a choice of metals and a wide variety of finishes and colours.

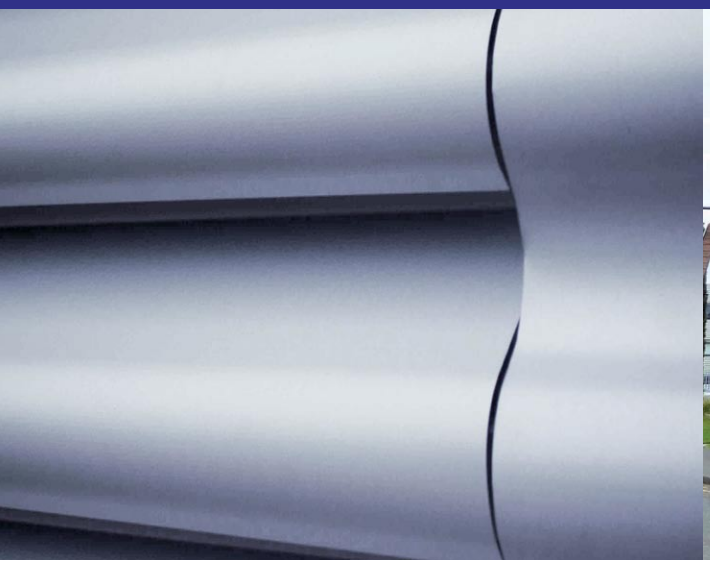
Three individual profile shapes are available for bespoke designs and constructions plus an insulated composite panel. Produced in aluminium and steel, Sinusoidal can be used on both roofs and walls.*

Depending upon the substrate Sinusoidal is available with Prisma, Pvf$^2$, HPS200 Ultra, and Powder coatings. The standard colour choice is extensive and 'special' colours are readily available.

Tel: 0118 927 2424 | Email: info@archprof.co.uk

*Not all profiles are suitable for use on walls – contact Architectural for project specific advice.*

# and create eye catching projects



Sinusoidal is available in three profile depths – 18mm, 40mm, and 45mm. These allow designers to experiment with different textures to create award winning elevations.

When combined with the exciting APL StrongBak™ SFS systems, Sinusoidal can be integrated into a complete 'through wall' construction capable of spanning up to 10 metres.

Education, commercial, office, manufacturing – Sinusoidal suits them all and it is a particularly economical cladding profile, especially when combined with the APL Tritherm™ spacer system. U values as low as 0.14 W/m$^2$.k are achievable using standard components – and lower U values are easily accommodated.
